
Micro Lynx Option Card Configurations

DATE: 09/11/95
MODEL: Micro Lynx
REVISION: N/A
SERIAL NO: 1024 or above
SOFTWARE: N/A
DESCRIPTION:

The Micro Lynx System Unit chassis has undergone a metal work upgrade, which changes the way option cards are installed. When fitting new units with ACG, M3 and VITC Option Cards; different hardware is required.

When ordering Option Cards for the Micro Lynx, please provide the System Unit serial number, so your order will be shipped correctly. The following is the list of configurations.

New Metal Work (Serial Number 1024 and above)

- ACG-1 and ACG-2
 - ACG Options Installation Kit (Part No. 71B018)
 - Option Ribbon Cable (Part No. 71C082)
- M3 and VITC Option Cards
 - Option Ribbon Cable (Part No. 71C082)
 - (These cards are mounted directly to the new chassis and do not require the metal bracket that the ACG Cards use.)

Old Metal Work (Serial Number 1024 and below)

- Micro Lynx units with serial numbers below 1024 will still use the original Options Installation Kit (Part No. 71B011).
